

Creating Student Chatbot Website: Scoping V1

Team Members

- **Cedillo, Eusebio** – Frontend Developers
- **Rozul, Politico** – Backend Developers
- **Dagdag** – Documentation

SMART Objectives

1. **Specific:**
To develop a student chatbot website that provides real-time responses to questions about school activities, schedules, and general inquiries.
2. **Measurable:**
Success will be measured by achieving at least 90% chatbot response accuracy and full website functionality tested before deployment.
3. **Achievable:**
The team has the required technical skills in web development, chatbot integration, and project documentation to complete the task.
4. **Relevant:**
This project aligns with the goal of improving communication and accessibility for students, enhancing their overall school experience.
5. **Time-bound:**
The project will be developed and completed within two weeks, including testing and final deployment, before the set milestone date.

Constraints + Boundaries (In & Out Scope, Time & Cost)

In Scope

- Designing and coding the chatbot website interface.
- Implementing chatbot logic and responses.

- Creating documentation and project reports.
- Testing the chatbot's responses and user interaction flow.

Out of Scope

- Mobile app version of the chatbot.
- Integration with external school databases.
- Offline chatbot functionality.

Time Constraint

- Project Start Date: **October 8, 2025**
- Deadline: **October 10, 2025** for prototype setup
- Estimated total development time: **16–20 hours**

Cost Constraint

- Tools used are free (GitHub, HTML/CSS/JS, and basic hosting).
- No financial cost, only time investment from team members.
